

A cartoon illustration of the equation $\sqrt{16} = 4$. The square root symbol, the number 1, the number 6, the equals sign, and the number 4 are all anthropomorphized with faces, arms, and legs. The square root symbol is on the left, followed by the number 1, then the number 6, then the equals sign, and finally the number 4 on the right. Each character has a simple, friendly face with a smile and small eyes. They are standing on two legs and have two arms each. The entire illustration is in a simple, black-and-white line-art style.
